

Folkestone & Hythe birding and moths

Site guide: Hythe Redoubt and Ranges

Location: Heading west from Hythe on the A259, pass Nickoll's Quarry and the Botolph's Bridge turning, and park where the road joins the seawall (TR 128320). Note that there is currently no access from this end due to coastal defence works (due to finish summer 2008).

Alternative access is from the east end via Hythe (take St. Leonard's Road to the end, park, and walk west).

Facilities: None on site, but there is the Jet garage by Nickoll's Quarry, and the nearby towns of Hythe and Dymchurch.

Access/route: Access to the ranges is restricted only to the foreshore, and then only when there is no firing. This is generally early mornings and evenings (though not always as sometimes there is night firing) and over public holiday periods, e.g. Christmas and Easter. Opening times are displayed on boards at either end of the site, and are available here: <http://www.hythe-kent.com/fshore3.htm>

Access to or from the Redoubt end can be tricky at high tide (and it is best to check tide times - <http://www.hythe-kent.com/fshore2.htm>) Disabled access from either end is difficult.

Access to the seawall by the Redoubt is unrestricted, and it is possible to walk west from here to the Willop Outfall, and beyond.

Birds: The bay can be scanned from the fishing boats at the Hythe end or from the Redoubt. Red-throated Diver and Great Crested Grebe are numerous on the sea in winter, and Black-throated Diver, Great Northern Diver, Red-necked Grebe, and Slavonian Grebe have occurred.

A Common Scoter flock may be present offshore, and Eider, Velvet Scoter and Long-tailed Duck have been recorded.

Seawatching is better further east out of the bay at Mill Point, but Manx and Mediterranean Shearwaters, and Pomarine Skua have been seen, whilst Brent Geese, ducks, waders, and terns are more usual.

Roosting Sandwich and Common Terns - Hythe Ranges

Terns sometimes form roosting flocks on the beach - usually Common and Sandwich, but Black has occurred and Little is a former breeder. Waders also frequent the foreshore: Ringed Plover breed, Oystercatcher, Turnstone, Sanderling and occasionally Purple Sandpiper winter. Redshank and Lapwing are former breeders, and Avocet, Stone Curlew, Little Ringed Plover,

Jack Snipe, Woodcock, Black-tailed Godwit, Greenshank and Green Sandpiper have occurred on passage.

Little Owl, Turtle Dove, Nightingale, and Wheatear have bred in recent years, and common migrants occur on passage, however there is no public access to the bushes. Visual migration can be witnessed here, with Swifts, hirundines, wagtails, pipits, thrushes and finches involved in season.

Oddities have included Little Egret, Spoonbill, Bewick's Swan, Bean Goose, Pink-footed Goose, Goldeneye, Montagu's Harrier, Little Auk, Barn Owl, Long-eared Owl, Wood Lark, Shore Lark, Grasshopper Warbler, Hooded Crow, Raven, Lapland Bunting and Snow Bunting.

For further information refer to Roger Norman's account of birdwatching at this site since 1950 (accessed via the link on the 'where to watch' page).
