

Long-tailed Duck

Clangula hyemalis

Category A

Very rare vagrant

11 records

Main breeding population in Fenno-Scandia and northern Russia. Winters around the coasts of western Europe, from Norway south to Morocco.

An uncommon but regular passage migrant and winter visitor in Kent.

Long-tailed Duck at Samphire Hoe (Ian Roberts)

There was a series of six records in the seven years between 1957 and 1963, but then a gap of almost thirty years before the first modern record in 1991. Further sightings followed in 1995 and 2000 but then there was a 13 year gap until the most recent in 2013. The records by year are shown in figure 1.

Figure 1: Long-tailed Duck records since 1985 at Folkestone and Hythe

Apart from one on 20th October 1957 and a spring migrant on 16th April 2000, all other records fall between 20th November (week 47) and 10th February (week 6), as shown in figure 2.
