

# Long-tailed Skua

*Stercorarius longicaudus*

Category A

Very rare vagrant

10 records

Breeds in northern Fenno-Scandia and Russia. Wintering areas poorly known, though evidently all in the southern hemisphere. Generally migrates via an Atlantic route with only small numbers tending to use the English Channel / North Sea.

A passage migrant to Kent, which is rare in spring and scarce in autumn.

First recorded at Folkestone and Hythe in 1996, with nine subsequent records as shown in figure 1.

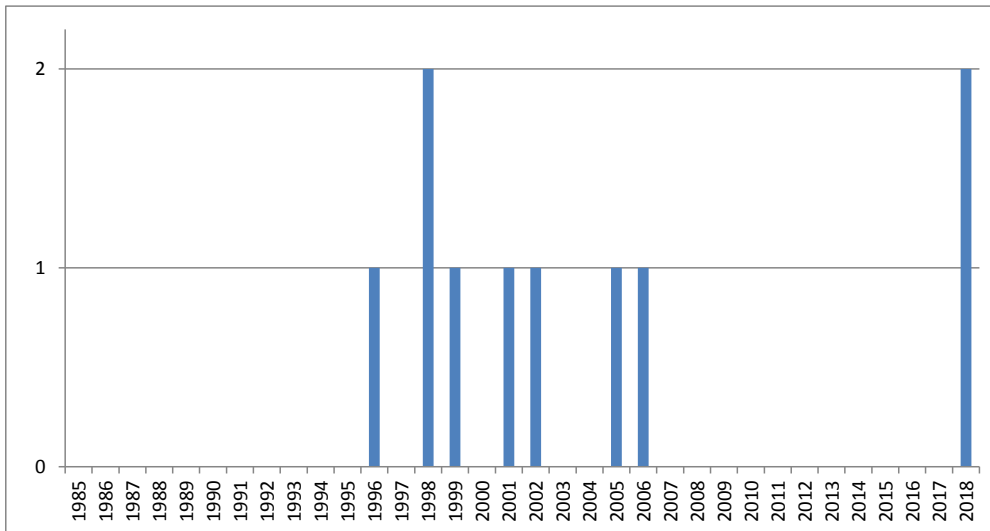

Figure 1: Long-tailed Skua records at Folkestone and Hythe

Records fall into two distinct periods, with three in spring (all in May) and seven in autumn, between the 24<sup>th</sup> August (week 34) and 10<sup>th</sup> November (week 45), as demonstrated by figure 2.

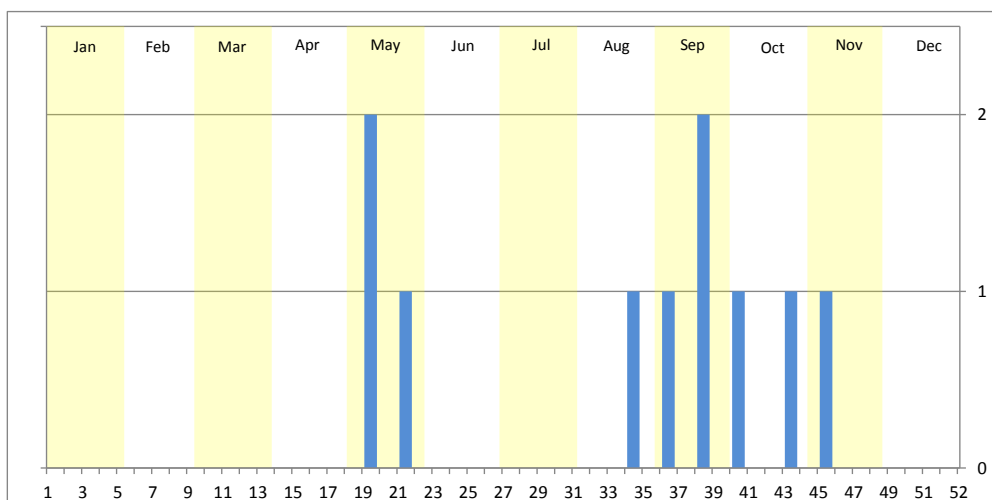

Figure 2: Long-tailed Skua records at Folkestone and Hythe by week

All but two were found at Folkestone, with seven at Copt Point with one at Mill Point, and the others at Hythe (one of which was later seen off Mill Point as well).

The full list of records is as follows:

**1996** Copt Point, juvenile flew west, 24<sup>th</sup> August (D. A. Gibson)

**1998** Copt Point, adult flew east, 10<sup>th</sup> May (D. A. Gibson, I. A. Roberts)

**1998** Copt Point, juvenile offshore then flew east, 5<sup>th</sup> September (D. A. Gibson)

- 1999** Copt Point, juvenile flew east, 20<sup>th</sup> September (I. A. Roberts)
- 2001** Copt Point, adult flew east, 10<sup>th</sup> May (I. A. Roberts)
- 2002** Copt Point, juvenile flew east, 23<sup>rd</sup> September (I. A. Roberts)
- 2005** Mill Point, juvenile flew east, 24<sup>th</sup> October (I. A. Roberts)
- 2006** Copt Point, juvenile flew west, 6<sup>th</sup> October (I. A. Roberts)
- 2018** Hythe, adult, 24<sup>th</sup> May (I. A. Roberts), later flew east past Mill Point (B. Harper)
- 2018** Hythe, juvenile, 10<sup>th</sup> November (S. McMinn)
